

Analog Modules, Inc.

UNIVERSAL INTERFACE BOARD

- Permits easy monitoring of all input/output signals
- Commonly used signals are available through BNC connectors
- Integrated batter holder and power supply connection

The Universal Interface Board can be used with the:

PLDD-120-1-1
PLDD-120-9-1
PLDD-200-12-20

Its purpose is to allow the user convenient access to all the input and output connections.

The UIB-01 comes mounted on a base plate which also accepts any of our drivers. The base plate will bolt to a standard optical bench with 1 inch center to center hole spacing.

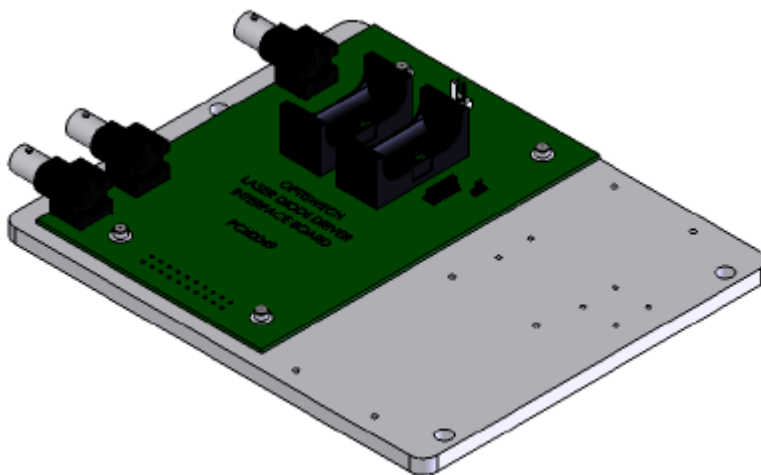

**Specifications are subject to change without notice.*

APPLICATIONS: Ranging, remote sensing, research, and other defense and security applications.

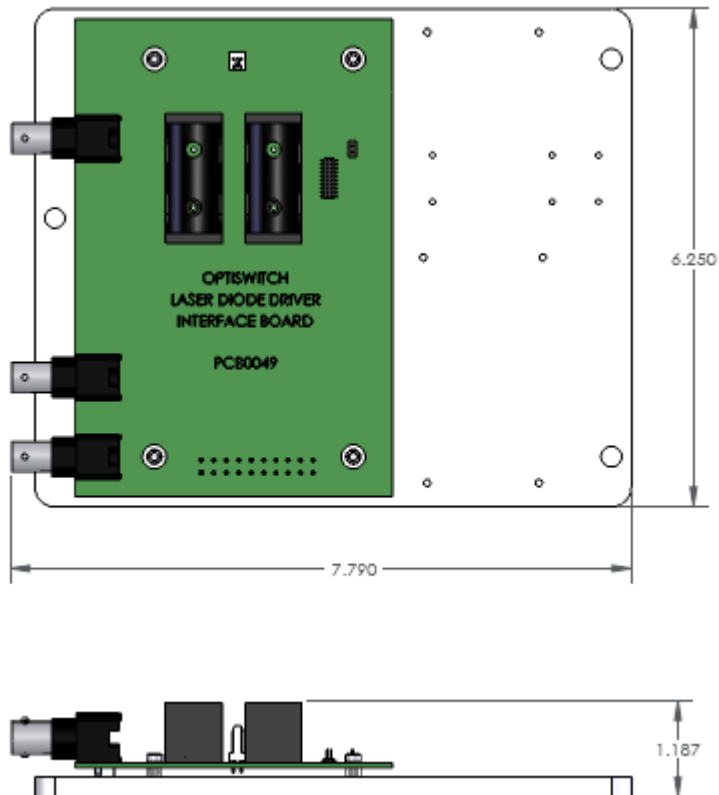

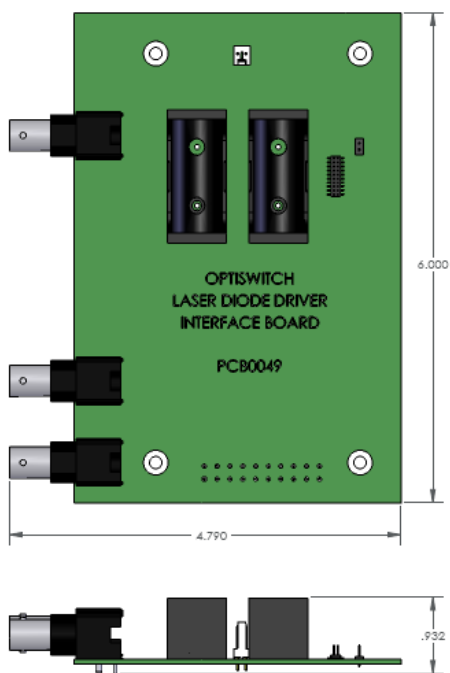

In the event this commodity will be transferred to a "foreign person" as defined in 22 CFR 120.16, either outside or within the United States, a validated US State Department license is required.
